

Empowering Communities

“Small scale distributed
production facilities
integrated with your
community,
will enable you to
grow what you know™
and make energy
that will provide
Energy Independence.”

Bill Bivins, CEO/CTO
One World Clean Energy

There are 1.6 billion people living energy impoverished in underserved communities. The United Nations FOA, The World Wildlife Fund and many others draw a direct correlation between the lack of access to energy and poverty.

One World Clean Energy™

Our mission is to provide affordable sustainable energy anywhere in the world.

One World Clean Energy strives to meet the needs of the underserved communities or businesses where energy is either not available or not affordable.

The One World Clean Energy Integrated Biorefinery

Our patent pending **Integrated Biorefinery** not only integrates technology. They integrate with the community. This provides distinct competitive advantages over traditional renewable energy facilities.

Our **Integrated Biorefinery** integrates technology in a unique design that simultaneously produces natural gas, electricity and both bio-fuels with **zero waste** and near zero emissions.

Our **Integrated Biorefinery** can use ANY agricultural crop in ANY agricultural region to produce affordable, sustainable and clean energies.

As with all OWCE technologies, the **OWCE Integrated Biorefinery** produces **zero waste** and near **zero emissions** with **NO odors**.

Our goals are simple:

- Reduce waste water and/or landfill waste cost, fees or surcharges
- Reduce overall water, solids discharge
- Reduce landfill deposits
- Reduce greenhouse gas emissions
- And potentially remove production constraints

All with little or no change to your current operating procedures or processes.

Bring Affordable Sustainable Energy to Your Community

True sustainability is available to you today through our proven, economically viable technology. Contact us today for a One World Clean Energy Solution tailored for you.
