

Empowering Communities

“OWCE Integrates small scale waste processing and energy technologies into communities, to enabling them to improve living standards for their citizens... to empower their community.”

Bill Bivins, CEO/CTO
One World Clean Energy

Communities continue the constant struggle to provide waste management and waste water treatment for their citizens. In the US, each person generates 7.2 pounds of landfill waste per day. Cities ‘treat’ sewer water to reduce carcinogens to an EPA specified level then reintroduced into waterways for added dilution. As populations grow, these challenges will grow. Burying and dilution are not sustainable solutions.

One World Clean Energy™

Our mission is to provide affordable sustainable energy anywhere in the world.

One World Clean Energy strives to meet the needs of the underserved communities or businesses where energy production or waste management or water treatment is either not available or not affordable.

The One World Clean Energy Gasification Solution

Our proprietary **OWCE Gasification (OWCE IGCC) Technology** processes landfill waste and sewer water to produce affordable sustainable clean energy!

The **OWCE IGCC** is a unique shop fabricated modular design that simultaneously produces synthetic gas, electricity, and both heat and steam energies.

As with all OWCE technologies, the **OWCE IGCC** produces **zero waste** and near **zero emissions** with **NO odors**.

Our goals are simple:

- Reduce waste water and/or landfill waste cost, fees or surcharges
- Reduce overall water, solids discharge
- Reduce landfill deposits
- Reduce greenhouse gas emissions
- And potentially remove production constraints

All with little or no change to your current operating procedures or processes.

Bring Affordable Sustainable Energy to Your Community

True sustainability is available to you today through our proven, economically viable technologies. Contact us today for a One World Clean Energy Solution tailored for you.
